**INDICATIONS FOR USE:**

The Bard® Breast Tissue Markers are intended to radiographically mark the location of the breast biopsy during an open surgical breast biopsy or a percutaneous breast biopsy procedure. These markers are also intended for use as a diagnostic tool to evaluate the risk/benefit prior to the use of this device.

**WARNINGS:**

1. Do not use the product if the sterile barrier has been previously opened or if the package is damaged.
2. Do not use the product if it is not in its original sterile packaging.
3. Bard® Breast Tissue Markers have been designed for single use only. Reusing these medical devices bears the risk of cross-patient contamination as medical devices – particularly those with long and small lumina, joints, and/or crevices between components – are difficult or impossible to clean once body fluids or tissues with potential pyrogenic or microbial contamination are introduced.
4. Although polysaccharide (starch) has known hemostatic properties, the user should continue to employ standard methods for obtaining hemostasis following the biopsy procedure.

**COMPPLICATIONS:**

After use, the product may be a potential biohazard. Handle and dispose of in accordance with acceptable medical practice and applicable local laws and regulations.
